

# The Wonderful World of Vaccines

Ah yes the wonderful Polio vaccines, a boon for mankind

## WHY YOU SHOULD AVOID TAKING VACCINES

Dr. James Howenstine, MD

July 29, 2009

(12/7/03)

***Dr. James R. Shannon, former director of the National institute of health declared, "the only safe vaccine is one that is never used."***

Cowpox vaccine was believed able to immunize people against smallpox. At the time this vaccine was introduced, there was already a decline in the number of cases of smallpox. Japan introduced compulsory vaccination in 1872. In 1892 there were 165,774 cases of smallpox with 29,979 deaths despite the vaccination program. A stringent compulsory smallpox vaccine program, which prosecuted those refusing the vaccine, was instituted in England in 1867. Within 4 years 97.5 % of persons between 2 and 50 had been vaccinated. The following year England experienced the worst smallpox epidemic<sup>[1]</sup> in its history with 44,840 deaths. Between 1871 and 1880 the incidence of smallpox escalated from 28 to 46 per 100,000. ***The smallpox vaccine does not work.***

Much of the success attributed to vaccination programs may actually have been due to improvement in public health related to water quality and sanitation, less crowded living conditions, better nutrition, and higher standards of living. Typically the incidence of a disease was clearly declining before the vaccine for that disease was introduced. In England the incidence of polio had decreased by 82 % before the polio vaccine was introduced in 1956.

In the early 1900s an astute Indiana physician, Dr. W.B. Clarke, stated "***Cancer was practically unknown until compulsory vaccination with cowpox vaccine began to be introduced. I have had to deal with two hundred cases of cancer, and I never saw a case of cancer in an unvaccinated<sup>[2]</sup> person.***"

There is a widely held belief that vaccines should not be criticized because the public might refuse to take them. ***This is valid only if the benefits exceed the known risks of the vaccines.***

## **Do Vaccines Actually Prevent Disease?**

This important question does not appear to have ever been adequately studied. Vaccines are enormously profitable for drug companies and recent legislation in the U.S. has exempted lawsuits against pharmaceutical firms in the event of adverse reactions to vaccines which are very common. In 1975 Germany stopped requiring pertussis (whooping cough) vaccination. Today less than 10 % of German children are vaccinated against pertussis. The number of cases of pertussis has steadily decreased[3] **even though far fewer children are receiving pertussis vaccine.**

**Measles outbreaks have occurred in schools with vaccination rates over 98 % in all parts of the U.S. including areas that had reported no cases of measles for years.** As measles immunization rates rise to high levels measles becomes a disease seen only in vaccinated persons. An outbreak of **measles occurred in a school where 100 % of the children had been vaccinated. Measles mortality rates had declined by 97 % in England before measles vaccination was instituted.**

**In 1986 there were 1300 cases of pertussis in Kansas and 90 % of these cases occurred in children who had been adequately vaccinated.** Similar vaccine failures have been reported from Nova Scotia where pertussis continues to be occurring despite universal vaccination. Pertussis remains endemic[4] in the Netherlands where for more than 20 years 96 % of children have received 3 pertussis shots by age 12 months.

After institution of diphtheria vaccination in England and Wales in 1894 **the number of deaths from diphtheria rose by 20 % in the subsequent 15 years.** Germany had compulsory vaccination in 1939. The rate of diphtheria spiraled to 150,000 cases that year whereas, Norway which did not have compulsory vaccination, had only 50 cases of diphtheria the same year.

The continued presence of these infectious diseases in children who have received vaccines proves that life long immunity which follows natural infection **does not occur in persons receiving vaccines.** The injection process places the viral particles into the blood without providing any clear way to eliminate these foreign substances.

## **Why Do Vaccines Fail To Protect Against Diseases?**

Walene James, author of **Immunization: the Reality Behind The Myth**, states that the full[5] inflammatory response is necessary to create real immunity. Prior to the introduction of measles and mumps vaccines children got measles and mumps and in the great majority of cases these diseases were benign. Vaccines "trick" the body so it does not mount a complete inflammatory response to the injected virus.

## **Vaccines and Sudden Infant Death Syndrome SIDS**

The incidence of Sudden Infant Death syndrome SIDS has grown from .55 per 1000 live births in 1953 to 12.8 per 1000 in 1992 in Olmstead County, Minnesota. The peak incidence for SIDS is age 2 to 4 months the exact time most vaccines are being given to children. 85 % of cases of SIDS occur in the first 6 months of infancy. The increase in SIDS as a percentage of total infant deaths has risen from 2.5 per 1000 in 1953 to 17.9 per 1000 in 1992. This rise in SIDS deaths has occurred during a period when nearly every childhood disease was declining due to improved sanitation and medical progress except SIDS. ***These deaths from SIDS did increase during a period when the number of vaccines given a child was steadily rising to 36 per child.***

Dr. W. Torch was able to document 12 deaths in infants which appeared within 3½ and 19 hours of a DPT immunization. He later reported 11 new cases of SIDS death and one near miss which had occurred within 24 hours of a DPT injection. When he studied 70 cases of SIDS two thirds of these victims[6] had been vaccinated from one half day to 3 weeks prior to their deaths. None of these deaths was attributed to vaccines. Vaccines are a sacred cow and nothing against them appears in the mass media because they are so profitable to pharmaceutical firms.

There is valid reason to think that not only are vaccines worthless in preventing disease they are counterproductive because they injure the immune system permitting cancer, auto-immune diseases and SIDS to cause much disability and death.

### **Are Vaccines Sterile?**

Dr. Robert Strecker claimed that the department of defense DOD was given \$10,000,000 in 1969 to create the AIDS virus to be used as a population-reducing[7] weapon against blacks. By use of the Freedom of Information Act Dr. Strecker was able to learn that the DOD secured funds from Congress to perform studies ***on immune destroying agents for germ warfare.***

Once produced, the vaccine was given in two locations. Smallpox vaccine containing HIV was given to 100,000,000 Africans in 1977. Over 2000 young white homosexual males in New York City were given Hepatitis B vaccine that contained HIV virus in 1978. This vaccine was given at New York City Blood Center. The Hepatitis B vaccine containing the HIV virus was also administered to homosexual males in San Francisco, Los Angeles, St.Louis, Houston and Chicago in 1978 and 1979. U.S. Public Health epidemiology studies have disclosed that these same 6 cities had the highest incidence of AIDS, Aids related Complex (ARC) and deaths rates from HIV, when compared to other U.S. cities.

When a new virus is introduced into a community. It takes 20 years for the number of cases to double. If the fabricated story that green monkey bites of

pygmies led to the HIV epidemic, the alleged monkey bites in the 1940s should have produced a peak in the incidence of HIV in the 1960s at which time ***HIV was non existent in Africa***. The World Health Organization (WHO) began a African smallpox vaccination campaign in 1977 that targeted urban population centers and avoided pygmies. If the green monkey bites of pygmies truly caused the HIV epidemic the incidence of HIV in pygmies should have been higher than in urban citizens. However, ***the opposite was true***.

In 1954 Dr. Bernice Eddy (bacteriologist) discovered live monkey viruses in supposedly sterile inactivated polio vaccine[8] developed by Dr. Jonas Salk. This discovery was not well received at the NIH and Dr. Eddy was demoted. Later Dr. Eddy, working with Sarah Stewart, discovered SE polyoma virus. This virus was quite important because it caused cancer in every animal receiving it. Yellow fever vaccine had previously been found to contain avian (bird) leukemia virus. Later Dr. Hilleman isolated SV 40 virus from both the Salk and Sabin polio vaccines. ***There were 40 different viruses[9] in these polio vaccines they were trying to eradicate. They were never able to get rid of these viruses contaminating the polio vaccines. The SV 40 virus causes malignancies. It has now been identified in 43 % of cases of non-Hodgkin lymphoma[10] , 36 % of brain tumors[11] , 18 % of healthy blood samples, and 22 % of healthy semen samples, mesotheliomas and other malignancies. By the time of this discovery SV 40 had already been injected into 10,000,000 people in Salk vaccine. Gastric digestion inactivates some of SV 40 in Sabin vaccine. However, the isolation of strains of Sabin polio vaccine from all 38 cases of Guillan Barre Syndrome[12] GBS in Brazil suggests that significant numbers of persons are able to be infected from this vaccine. All 38 of these patients had received Sabin polio vaccine months to years before the onset of GBS. The incidence of non-Hodgkin lymphoma has "mysteriously" doubled since the 1970s.***

Dr. John Martin, Professor of Pathology at the Univ. of Southern California, was employed by the Viral Oncology Branch of the Bureau of Biologics (FDA) from 1976 to 1980. While employed there he identified foreign DNA in the live polio vaccine Orimune Lederle that suggested serious vaccine contamination. He warned his supervisors about this problem and was told to ***discontinue his work as it was outside the scope of testing required for polio vaccine***.

Later Dr. Martin learned that ***all eleven of the African green monkeys used to grow the Lederle polio virus Orimune had grown simian cytomegalovirus from kidney cell cultures. Lederle was aware of this viral contamination as their Cytomegaloviral Contamination Plan[13] clearly showed in 1972. The Bureau of Biologics decided not to pursue the matter so production of infected polio vaccine continued.***

In 1955 Dr. Martin identified unique cell destroying viruses termed stealth viruses in patients with chronic fatigue syndrome. These viruses lacked genes that would enable the immune system to recognize them. Thus they were protected by the body's failure to develop antiviral antibodies. In March of 1995, Dr. Martin learned that ***some of these stealth viruses had originated from African green monkey simian cytomegalovirus of a type known to infect man.***

The Lederle vaccine experience suggests that the higher-ups are not concerned about sloppy and dangerous preparation of vaccines. Animal cross infection is a huge unsolved current problem for all vaccine manufacturing. If this vaccine production sounds like an unbelievable mess to you, ***you are right.***

The influential Club of Rome has a position paper in which they state that the world population is too large and needs to be reduced by 90 %. This means that 6 billion people must be reduced to 500 to 600 million. Obviously, creating famines and genocidal wars such as wrecked havoc in Africa, and loosing new laboratory-created diseases (HIV, Ebola, Marburg<sup>[14]</sup>, and probably West Nile virus and SARS) can help reduce the population. Other elitist groups (Trilaterals, Bildenbergers) have expressed similar concerns about excess people on planet Earth.

The company that was projected to produce the new smallpox vaccine in the U.S. was in serious trouble in England because of unsatisfactory quality of operations before setting up their facility in the U.S. Why would their performance here be any better than it was in England?

If there are important powerful groups of people that are determined to reduce the world population, what could be a more diabolically clever way to eliminate people than to inject them with a cancer-causing vaccine? ***The person receiving the injection would never suspect that the vaccine taken 10 to 15 years earlier had caused the cancer to appear.***

### **Other Dangers From Vaccines**

In the March 4, 1977 issue of Science Jonas and Darrell Salk warn, "Live virus vaccines against influenza or poliomyelitis ***may in each instance produce the disease it intended to prevent. The live virus against measles and mumps may produce such side effects as encephalitis (brain damage).***

The swine flu vaccine was administered to the American public even though there had never been a case of swine flu identified in a human. Farmers refused to use the vaccine because it killed too many animals. Within a few months of use in humans this vaccine caused many cases of serious nerve injury (Guillan Barre syndrome).

An article in the Washington Post on Jan. 26, 1988 mentioned that all cases of polio since 1979 had been caused by the polio vaccine with no known cases of polio from a wild strain since 1979. This might have created a perfect situation to discontinue the vaccine, but the vaccine is still given. Vaccines are a wonderful source of profits with no risks to the drug companies since vaccine injuries are now recompensed by the government.

The steady escalation in the number of vaccines administered has been followed by an identical rise in the incidence of auto-immune diseases (rheumatoid arthritis, subacute lupus erythematosus, psoriasis, multiple sclerosis, asthma) seen in children. While there is a genetic transmission of some of these diseases many are probably due to the injury from foreign protein particles, mercury, aluminum, formaldehyde and other toxic agents injected in vaccines.

In 1999, the rotavirus vaccine was recommended by the Center for Disease Control for all infants. When this vaccine program was instituted several infants died and many had life endangering bowel obstructions. Preliminary trials<sup>[15]</sup> of the rotavirus vaccine had demonstrated an increased incidence of intussusception 30 times greater than normal but the vaccine was released anyway without special warnings to practitioners to be on the lookout for bowel problems. ***Children's vaccines are often not studied for toxicity possibly because such study might eliminate them from being used.***

***A large study from Australia showed that the risk of developing encephalitis from the pertussis vaccine was 5 times greater than the risk of developing encephalitis by contacting pertussis by natural methods.***

Naturally acquired immunity by illness evolves by spread of a virus from the respiratory tract to the liver, thymus, spleen, and bone marrow. When symptoms begin, the entire immune response has been mobilized to repel the invading virus. This complex immune system response creates antibodies that confer life long immunity against that invading virus and prepares the child to respond promptly to an infection by the same virus in the future.

Vaccination, in contrast, results in the persisting of live virus or other foreign antigens within the cells of the body, a situation that may provoke auto-immune reactions as the body attempts to destroy its own infected cells. There is no surprise that the incidence of auto-immune diseases (rheumatoid arthritis, subacute lupus erythematosus, multiple sclerosis, asthma, psoriasis) has risen sharply in this era of multiple vaccine immunization.

### **Vaccine Induced Type 1 Diabetes Mellitus**

Dr. John Classen has published 29 articles on vaccine-induced<sup>[16]</sup> diabetes. At least 8 of 10 children with Type 1 (insulin needing) diabetes have this disease as a result of vaccination. These children may have avoided measles, mumps, and

whooping cough **but they have received something far worse: an illness that shortens life expectancy by 10 to 15 years and results in a life requiring constant medical care.**

**Dr. Classen has shown in Finland, the introduction of hemophilus type b vaccine caused three times as many cases of type 1 diabetes as the number of deaths and brain damage from hemophilus influenza type b it might have prevented.**

**In New Zealand, the incidence of Type 1 diabetes in children rose by 61 % after an aggressive vaccine program against hepatitis B.** This same program has been started in the U.S.A. so we can now look forward to many cases of Type 1 diabetes in children. Similar rises in Type 1 diabetes have been seen in England, Italy, Sweden, and Denmark after immunization programs against Hepatitis B.

### **Toxic Substances Are Needed To Make Vaccines.**

Vaccines contain many toxic substances that are needed to prevent the vaccines from becoming infected or to improve the performance of the vaccine. Among these substances are mercury, formaldehyde and aluminum.[\[17\]](#)

In the past 10 years, the number of autistic children has risen from between 200 and 500 percent in every state in the U.S. This sharp rise in autism followed the introduction of measles, mumps and rubella vaccine in 1975.

Representative Dan Burton's healthy grandson was given injections for 9 diseases in one day. **These injections were instantly followed by autism.** These injections contain a preservative of mercury called thimerosal. The boy received 41 times the amount of mercury which is capable of harm to the body. Mercury is a neurotoxin that can injure the brain and nervous system. And tragically, it did.

In the United States the number of compulsory vaccine injections has increased from 10 to 36 in the last 25 years. During this period, there has been a simultaneous increase in the number of children suffering learning disabilities and attention deficit disorder. Some of these childhood disabilities are related to intrauterine cerebral damage from maternal cocaine use, but probably vaccines cause many of the others.

Many vaccines contain aluminum. A new disease called macrophagic myofasciitis causes pain in muscles, bones and joints. **All persons with this disease have received aluminum containing vaccines. Deposits of aluminum are able to remain as an irritant in tissues and disturb the immune and nervous system for a lifetime.**

Nearly all vaccines contain aluminum and mercury. These metals appear to play an important role in the etiology of Alzheimer's Disease. An expert at the 1997

International Vaccine Conference related that ***a person who takes 5 or more annual flu vaccine shots has increased the likelihood of developing Alzheimer's Disease by a factor of 10 over the person who has had 2 or fewer flu shots.***

When we take vaccines we are playing a modern version of Russian Roulette. We not only get exposed to aluminum, mercury, formaldehyde and foreign cell proteins but we may get simian virus 40 and other dangerous viruses which can cause cancer, leukemia and other severe health problems because the vaccine pool is contaminated due to careless animal isolation techniques. Congress has protected the manufacturers from lawsuits, ***so dangerous vaccines simply increase profits at no risk to the drug companies.***

U.S. children aged 2 months began receiving hepatitis B vaccine in December 2000. No peer-reviewed studies of the safety of hepatitis B in this age bracket had been done. Over 36,000 adverse reactions with 440 deaths were soon reported but the true incidence is much higher as reporting is voluntary ***so only approximately 10 % of adverse reactions get reported.*** This means that about 5000 infants are dying annually from the hepatitis B vaccine. The CDC's Chief of Epidemiology admits that the frequency of serious reactions to hepatitis B vaccine is ***10 times higher than other vaccines.*** Hepatitis B is transmitted sexually and by contaminated blood, so the incidence of this disease must be near zero in this age bracket. A vaccine expert, Dr. Philip Incao, states that ***"the conclusion is obvious that the risks [18] of hepatitis B vaccination far outweigh the benefits. Once a vaccine is mandated the vaccine manufacturer is no longer liable for adverse reactions.***

Dr. W.B. Clarke's important observation that cancer was not found in unvaccinated individuals demands an explanation and one now appears forthcoming. ***All vaccines given over a short period of time to an immature immune system deplete the thymus gland (the primary gland involved in immune reactions) of irreplaceable immature immune cells.*** Each of these cells could have multiplied and developed into an army of valuable cells to combat infection and growth of abnormal cells. When these immune cells have been used up, permanent immunity may not appear. The Arthur Research Foundation in Tucson, Arizona estimates that ***up to 60 % of our immune system may be exhausted [19] by multiple mass vaccines (36 are now required for children). Only 10 % of immune cells are permanently lost when a child is permitted to develop natural immunity from disease.*** There needs to be grave concern about these immune system injuring vaccinations! Could the persons who approve these mass vaccinations know that they are impairing the health of these children, many of whom are being doomed to requiring much medical care in the future?

Compelling evidence is available that the development of the immune system after contracting the usual childhood diseases matures and renders it capable to fight infection and malignant cells in the future.

The use of multiple vaccines, which prevents natural immunity, promotes the development of allergies and asthma. ***A New Zealand study disclosed that 23 % of vaccinated children develop asthma , as compared to zero in unvaccinated children.***

Cancer was a very rare illness in the 1890's. This evidence about immune system injury from vaccinating affords a plausible explanation for Dr. Clarke's finding that only vaccinated individuals got cancer. Some radical adverse change in health occurred in the early 1900s to permit cancer to explode and vaccinating appears to be the reason.

Vaccines are an unnatural phenomena. My guess is that if enough persons said no to immunizations there would be a striking improvement in general health with nature back in the immunizing business instead of man. Having a child vaccinated should be a ***choice*** not a requirement. Medical and religious exemptions are permitted by most states.

When governmental policies require vaccinations before children enter schools coercion has overruled the lack of evidence of vaccine efficacy and safety. ***There is no proof that vaccines work and they are never studied for safety before release.*** My opinion is that there is overwhelming evidence that vaccines are dangerous and the only reason for their existence is to increase profits of pharmaceutical firms.

If you are forced to immunize your children so they can enter school, obtain a notarized statement from the director of the facility that they will accept full financial responsibility for any adverse reaction from the vaccine. Since there is at least a 2 percent risk of a serious adverse reaction they may be smart enough to permit your child to escape a dangerous procedure. Recent legislation passed by Congress gives the government the power to imprison persons refusing to take vaccines (smallpox, anthrax, etc). This would be troublesome to enforce if large numbers of citizens declined to be vaccinated at the same time.

NOTE: All the entire history of Vaccine production and use has been riddled with mind-numbing cruelty to animals and hideous human suffering; often of helpless infants. There is no way that God lends His blessing to methods such as these!! TC

**Now that they can no longer put thimersol (Hg) in vaccinations - mercury --**

*00:05:56 07/19/09 Sun*

Correction SOME vaccinations have slightly less than one micro gram of mercury, none have less: your average flu shot has 25 micro grams. Mercury is an unwanted by product of helium? manufacturing.

Vaccination and Mercury

Mercury is found in all vaccines even the so called “Mercury Free Vaccines”. If the vaccination dose contains less than one microgram of mercury the manufacturer can call his mercury an “impurity” and not explicitly list it. Please note that even one microgram of mercury is extremely toxic to the small undeveloped unprotected brain (See Brain Protection Protocol) of your fetus, infant or toddler. Many researchers believe without mercury many vaccines would not “work” even as poorly as they do. The mercury acts as an adjuvant IMO and is required as part of the vaccine’s method of action.

It has been said that many sudden deaths following vaccination (SIDs) can be prevented by sufficient vitamin C and vitamin A reserves but we should probably also take a good look at magnesium (See Magnesium Protocol) as a crucial factor in sudden death after vaccination.

In adults it has been seen how high levels of mercury in the heart becomes dangerous. Since deficient magnesium and high levels of mercury are related; childhood vaccines would be especially dangerous to administer in children deficient in magnesium.

## **Europe fast-tracking swine flu vaccine**

### **Europe fast-tracking swine flu vaccine -- raising concerns among some experts**

- By Maria Cheng, AP Medical Writer
- On Sunday July 26, 2009, 5:42 pm EDT

LONDON (AP) -- In a drive to inoculate people against swine flu before winter, many European governments say they will fast-track the testing of a vaccine, arousing concern among some experts about safety and proper doses.

The European Medicines Agency, the EU's top drug regulatory body, is accelerating the approval process for swine flu vaccine, and countries such as Britain, Greece, France and Sweden say they'll start using the vaccine after it's greenlighted -- possibly within weeks.

In an interview with The Associated Press, Dr. Keiji Fukuda, the World Health Organization's flu chief, warned about the potential dangers of untested vaccines, although he stopped short of criticizing Europe's approach outright.

"One of the things which cannot be compromised is the safety of vaccines," he said Friday. "There are certain areas where you can make economies, perhaps, but certain areas where you simply do not try to make any economies."

Flu vaccines have been used for 40 years, and many experts say extensive testing is unnecessary, since the swine flu vaccine will simply contain a new ingredient: the swine flu virus.

But European officials won't know if the new vaccine causes any rare side effects until millions of people get the shots. Still, they say the benefit of saving lives is worth the gamble.

"Everybody is doing the best they can in a situation which is far from ideal," said Martin Harvey-Allchurch, a spokesman for the European Medicines Agency. "With the winter flu season approaching, we need to make sure the vaccine is available."

In Europe, flu vaccines are usually tested on hundreds of people for several weeks or months, to ensure the immune system produces enough antibodies to fight the infection.

But to ensure swine flu vaccine is available as soon as possible, the European Medicines Agency is allowing companies to skip testing in large numbers of people before the vaccine is approved.

The main issue is probably that without thorough testing it's difficult to gauge the effective dosage -- meaning Europeans might get too weak a vaccine. It's unlikely the vaccine would endanger anyone, but until it is used in large numbers of people, no one will know for sure.

Europeans appear ready to use the vaccine widely before conducting any big studies to prove it is safe and effective. Neither the vaccine makers nor the European Medicines Agency would specify what basic safety tests are being done.

The U.S. is taking a more cautious approach: the government called Wednesday for several thousand volunteers to be injected with the swine flu vaccine in tests beginning in August to assess the vaccine's safety. American officials said results should be ready by the time the U.S. plans to roll out a vaccination campaign in October.

Results from the U.S. tests will be of limited use to Europe, since countries like Britain plan to start vaccinating as early as August -- before any American trial

data is available. The vaccines used in the U.S. will also be different from those in Europe.

Some experts favor urgent action.

"The consequences of not having a vaccine if this virus gets worse are very high," said Leonard Marcus, a public health expert at Harvard University. "If (regulatory authorities) took all the time that was necessary to make sure there are no side effects, ironically, in the effort to save a few lives, many lives could be lost."

But critics say dangers lurk in any strategy to vaccinate without robust testing.

Scant information exists on flu vaccines with adjuvants, a component used to stretch the active ingredient that is commonly found in European flu vaccines. There are no licensed flu vaccines with the ingredient in the U.S.

There is also limited or no data on the safety and effectiveness of vaccines with adjuvants in children under 3 and pregnant women -- two of the most vulnerable groups in a pandemic -- a global outbreak.

Mass swine flu vaccination campaigns will also take place in the shadow of the 1976 swine flu disaster, when hundreds of people in the U.S. developed Guillain-Barre syndrome, a paralyzing disorder, after being vaccinated.

Experts don't know why that happened, but say modern vaccine production techniques have improved since 1976. To avoid a similar episode, some say comprehensive testing before the vaccine is rolled out is essential.

"I can't see any possible excuse to not test it for safety before it's given to anyone," said George Annas, a bioethics expert at Boston University.

If the vaccine turns out to have dangerous side effects, it could generate a public backlash, particularly in a country like Britain, where many people remain suspicious of vaccines because of unsubstantiated allegations linking the measles, mumps and rubella vaccine to autism. That could lead to millions of people refusing vaccination.

When the bird flu crisis hit several years ago, the European Medicines Agency designed a special protocol to approve a vaccine for use in a pandemic as soon as possible.

The agency let companies submit data for a "mock-up" vaccine, using H5N1 bird flu. The idea was to do most of the testing before the global epidemic hit so when it did, drugmakers could insert the pandemic virus into the vaccine at the last minute.

When the first swine flu vaccine doses are ready, the European Medicines Agency will approve them largely based on data from the bird flu vaccine, since both will have the same basic ingredients.

If the agency thinks the bird flu data predicts how the swine flu virus will work, they will approve it, said spokesman Harvey-Allchurch.

The agency will then require regular reporting of the vaccine's effects as it is being administered -- monitoring that is normally done beforehand.

WHO's Fukuda said everyone involved in making the vaccine, from manufacturers to regulatory agencies, is looking at what steps can be taken to streamline the process.

"But there is no one who disagrees that one of the absolutes is that there can't be any question whether the vaccine is safe or not," he said.

WHO reported that the swine flu viruses aren't producing enough of a key vaccine ingredient, which may limit how much vaccine is available. Its laboratory network is now working to produce a new set of viruses that it hopes will work better.

Drugmakers including Baxter International, GlaxoSmithKline PLC, Novartis and Sanofi-Pasteur, however, insist they will be able to start shipping the first batches of vaccine soon.

British health officials have repeatedly said they will start vaccinating in August, as soon as the vaccine is approved. Other European countries, including Greece, France, Sweden, say they will use the vaccine after it gets the green light from the European agency, but none other than Britain expect to start the shots next month.

Associated Press writers Frank Jordans in Geneva, Malin Rising in Stockholm, Jenny Barchfield in Paris, and Derek Gatopoulos in Athens contributed to this report.

## [The 1918 Influenza Epidemic Was a Vaccine - Caused Disease](#)

Filed Under [Pandemic](#), [Vaccines](#)

**Very few people realize that the worst epidemic ever to hit America, the Spanish Influenza of 1918 was the after effect of the massive nation-wide vaccine campaign. The doctors told the people that the**

disease was caused by germs. Viruses were not known at that time or they would have been blamed. Germs, bacteria and viruses, along with bacilli and a few other invisible organisms are the scapegoats which the doctors like to blame for the things they do not understand. If the doctor makes a wrong diagnosis and treatment, and kills the patient, he can always blame it on the germs, and say the patient didn't get an early diagnosis and come to him in time.

If we check back in history to that 1918 flu period, we will see that it suddenly struck just after the end of World War I when our soldiers were returning home from overseas. That was the first war in which all the known vaccines were forced on all the servicemen. This mish-mash of poison drugs and putrid protein of which the vaccines were composed, caused such widespread disease and death among the soldiers that it was the common talk of the day, that more of our men were being killed by medical shots than by enemy shots from guns. Thousands were invalidated home or to military hospitals, as hopeless wrecks, before they ever saw a day of battle. The death and disease rate among the vaccinated soldiers was four times higher than among the unvaccinated civilians. But this did not stop the vaccine promoters. Vaccine has always been big business, and so it was continued doggedly.

It was a shorter war than the vaccine-makers had planned on, only about a year for us, so the vaccine promoters had a lot of unused, spoiling vaccines left over which they wanted to sell at a good profit. So they did what they usually do, they called a meeting behind closed doors, and plotted the whole sordid program, a nationwide (worldwide) vaccination drive using all their vaccines, and telling the people that the soldiers were coming home with many dread diseases contracted in foreign countries and that it was the patriotic duty of every man, woman and child to get "protected" by rushing down to the vaccination centers and having all the shots.

Most people believe their doctors and government officials, and do what they say. The result was, that almost the entire population submitted to the shots without question, and it was only a matter of hours until people began dropping dead in agony, while many others collapsed with a disease of such virulence that no one had ever seen anything like it before. They had all the characteristics of the diseases they had been

vaccinated against, the high fever, chills, pain, cramps, diarrhea, etc. of typhoid, and the pneumonia like lung and throat congestion of diphtheria and the vomiting, headache, weakness and misery of hepatitis from the jungle fever shots, and the outbreak of sores on the skin from the smallpox shots, along with paralysis from all the shots, etc.

The doctors were baffled, and claimed they didn't know what caused the strange and deadly disease, and they certainly had no cure. They should have known the underlying cause was the vaccinations, because the same thing happened to the soldiers after they had their shots at camp. The typhoid fever shots caused a worse form of the disease which they called para-typhoid. Then they tried to suppress the symptoms of that one with a stronger vaccine which caused a still more serious disease which killed and disabled a great many men. The combination of all the poison vaccines fermenting together in the body, caused such violent reactions that they could not cope with the situation. Disaster ran rampant in the camps. Some of the military hospitals were filled with nothing but paralyzed soldiers, and they were called war casualties, even before they left American soil. I talked to some of the survivors of that vaccine onslaught when they returned home after the war, and they told of the horrors, not of the war itself, and battles, but of the sickness at camp.

The doctors didn't want this massive vaccine disease to reflect on them, so they, agreed among themselves to call it Spanish Influenza. Spain was a far away place and some of the soldiers had been there, so the idea of calling it Spanish Influenza seemed to be a good way to lay the blame on someone else. The Spanish resented having us name the world scourge on them. They knew the flu didn't originate in their country.

20,000,000 died of that flu epidemic, worldwide, and it seemed to be almost universal or as far away as the vaccinations reached. Greece and a few other countries which did not accept the vaccines were the only ones which were not hit by the flu. Doesn't that prove something?

At home (in the U.S.) the situation was the same; the only ones who escaped the influenza were those who had refused the vaccinations. My

family and I were among the few who persisted in refusing the high pressure sales propaganda, and none of us had the flu not even a sniffle, in spite of the fact that it was all around us, and in the bitter cold of winter. Everyone seemed to have it. The whole town was down sick and dying. The hospitals were closed because the doctors and nurses were down with the flu. Everything was closed, schools, businesses, post office everything. No one was on the streets. It was like a ghost town. There were no doctors to care for the sick, so my parents went from house to house doing what they could to help the stricken in any way they could.

They spent all day and part of the night for weeks, in the sick rooms, and came home only to eat and sleep. If germs or viruses, bacteria, or any other little organisms were the cause of that disease, they had plenty of opportunity to latch onto my parents and "lay them low" with the disease which had prostrated the world. But germs were not the cause of that or any other disease, so they didn't "catch" it. I have talked to a few other people since that time, who said they escaped the 1918 flu, so I asked if they had the shots, and in every case, they said they had never believed in shots and had never had any of them.

Common sense tells us that all those toxic vaccines all mixed up together in people, could not help but cause extreme body-poisoning and poisoning of some kind or another is usually the cause of disease.

Whenever a person coughs or sneezes, most people cringe, thinking that the germs are being spread around in the air and will attack people. There is no need to fear those germs any more, because that is not the way colds are developed. Germs can't live apart from the cells (host) and can't do harm anyway, even if they wanted to. They have no teeth to bite anyone, no poison pouches like snakes, mosquitoes or bees, and do not multiply, except in decomposed substances, so they are helpless to harm. As stated before, their purpose is useful, not destructive.

The 1918 flu was the most devastating disease we ever had, and it brought forth all the medical bag of tricks to quell it, but those added drugs, all of which are poisons, only intensified the over-poisoned condition of the people, so the treatments actually killed more than the vaccines did.

## **Chinese Traditional Flu Meds. (From a Chinese Friend)**

I introduce you three kinds of low cost herbal medicine for influenza. They are available in most Chinese supermarket. The price varies from Can\$1.50 to \$3.00. These formulas do not have patents. You do not have to buy the same type as I suggested. Many manufacturers make equivalent product. There are different flavours. Some do not contain sugar. They have very long shelf life. I suggest you get them while they are available. They could be running out of stock once the flu comes again. Each package contains many bags. You could take one to two bags each time. I use 3 to 4 times per day. Each person could consume one to three packages per sickness depending how serious. That is \$1.50 could heal you. I usually take them once I feel sore throat at the earliest symptom. It heals me very quickly with very little pain. Half a package could heal me if I take them at earliest time. I suggest you stock three packages per family member. The extra stock could help your neighbour too.

Influenza follows God's law that it has a life cycle of 7 days. If you do not get healed within 7 days from the day of infection, it will take another 7 days. If you do not get healed within 14 days, it will take 21 days to get healed. Antibiotics and many cold medicines can hurt you badly. Vaccine won't work at all.

Enclosed graphic are the packages of the medicine I suggested. Medicine 1 called Banlangen. Ban means wooden panel. Lan means blue colour. Gen means root. It is a natural blue colour dye derived from the root of a plant. Chinese use wooden stamp to print pattern on cloth. This single ingredient herbal medicine is the most effective to heal flu. It was sold out on last SARS attack. Instruction on 1a indicates it is suitable for virus type influenza. I paid \$2.59 for 10 bags. Medicine 2 is a multi ingredients formula for virus flu. I paid \$1.50 for twenty bags. It is effective.

Medicine 3 is a preventive drink. It is suitable as daily beverage. It detoxifies your body.

Virus is a product of detoxification. In 1918, some American soldiers were manipulating poison gases after using vaccine. The toxic gases they inhaled caused mutation to become Spanish flu, which killed millions. Nowadays, many people have eaten insecticide; herbicide, antibiotics and all kinds of chemicals are venerable to cause mutation. For your survival, eat organic food. Do not accept any vaccine. Detoxify yourself before the pandemic arrive is the best solution.
